

ENHANCEMENT RELEASES DELIVER GOOD-FOR-INDUSTRY FEATURES TO THE USERS OF ALOHA PRODUCTS. FREQUENT ENHANCEMENT

RELEASES THROUGHOUT THE YEAR PROVIDE A HIGH ROI TO MAINTENANCE CUSTOMERS THROUGH FUNCTIONALITY THAT FOCUSES ON SPEED OF SERVICE, SECURITY/AUDIT, AND OPERATIONAL COST REDUCTION. MAINTENANCE CUSTOMERS CAN EXPECT TWO TO FOUR ENHANCEMENT RELEASES EACH YEAR. MAINTENANCE CUSTOMERS CAN ALSO ANTICIPATE ONE OR MORE STRATEGIC RELEASES THAT INTRODUCE NEW TECHNOLOGY FEATURES, SUCH AS BIOMETRIC TECHNOLOGY AND INCREASED SECURITY.

THE v6.0 RELEASE NOT ONLY INTRODUCES NEW FEATURES, BUT FOCUSES ON THE VERY STRATEGIC EFFORT OF MERGING OUR DOMESTIC AND INTERNATIONAL CODE BASES INTO A SINGLE, VERY STABLE, AND EXTREMELY FEATURE-RICH RELEASE - FOR ALL ALOHA POS USERS!

ALOHA POS v6.0 HIGHLIGHTED FEATURES

The v6.0 effort includes:

- ▶ 65 new features introduced in v5.3e in 2005.
- ▶ The rock-solid quality of our v5.3 "gold" releases from 2005.
- ▶ 33 new features released in 2005 to the international market and to select domestic labs as part of v5.4 releases.

In addition to the merge, users will benefit from biometric support for login, substantial architectural changes to remove the file share limitation that caused installation challenges for 10+ terminals in the Windows® 2000, NT, and XP Professional Edition operating systems and additional Cardholder Information Security Program (CISP) related changes.

Reduce Labor Costs

Employee Punctuality Control on Clock Outs

This new feature represents a HUGE ROI! With this enhancement, the POS not only restricts employees from early clock in, but absolutely prohibits late clock out. If an employee attempts to clock out after their scheduled time, a just in time (JIT) prompt appears, which requires a manager override to approve the late clock out, increasing employee awareness and the accuracy of their labor hours.

Reduce Training Costs and Improve Staff Communication

Implementing Employee Clock-In Movie

For users who want to motivate or train employees - right at clock-in time and right from the POS - you're going to love this one! With this feature you can configure the POS to automatically play a video to specific employees or all employees upon clock in. The new video support is very similar to Server Messages, where you can play different videos based on the employee or type of employee, and the video plays only once for each individual. Additionally, you can specify different video frames to play on certain dates - i.e., video frames 1 - 10 play on the 1st through the 10th of the month, to coordinate with a new promotion you are running.

Elimination of 10 Terminal Restriction

We implemented the Remote File Storage (RFS) feature which introduced some big architectural changes to overcome the 10 license limitation for file sharing in the Windows® 2000, NT, and XP Professional Edition operating systems. Aloha users can now support larger install environments without having to purchase expensive server-based operating systems and expensive Windows Client Access Licenses (CAL).

Quick Combo Enhancements

Apply Quick Combo in Reverse Order

The Aloha QuickService Quick Combo feature now has the ability to apply promotions regardless of the order sequence of the items entered. To use this feature, the cashier simply adds items to the check and then touches the "Make it a Combo" button. The POS quickly scans the items in item-ordered and reverse order sequence and then applies any applicable quick combos to the check.

Enhanced Quick Combo Promotions:

- ▶ Increased number of component items
- ▶ Easily upsell quick combos through 2 levels
- ▶ Control how quick combos are applied

Increased Components and Upsell Choices

A very common practice for quick-service restaurants is multiple upsell levels that allow the guest a choice to upsize their quick combos to larger portions and raise the total of the guest check. Quick-service restaurants also offer the

guest multiple choices for completing a quick combo. To provide quick-service restaurants extra flexibility, you can now configure up to ten components and two upsell levels for quick combo promotions. Prior to this enhancement, the system allowed only five components. To accommodate most menus, you can configure a button for each upsell level or configure increment and decrement buttons that cycle through the upsell levels until the check reflects the correct level.

Coupon Audits

This new feature provides great control for paper coupons, which really increases cost control for the user. With this enhancement, a new "number of coupons tendered" prompt appears requiring the server/cashier to enter the number of coupons they received (or the number of coupons in their cash drawer) during checkout. The POS compares this number to the actual coupons expected - based on the coupons tendered during the shift - and reports any variances.

Aloha QuickService now supports:

- ▶ Sharing cash drawers among employees
- ▶ Running a checkout for a cash drawer
- ▶ Reconciling coupons that have been accepted

Public Cash Drawers in Aloha QuickService

This new feature adds the great TableService public cash drawer support to our QuickService product. Public Cash Drawers allow any server or cashier with rights to close a check to a drawer and open the till - given certain restrictions. It is also important to understand when using this feature financial responsibility cannot be tracked to any single individual because multiple people have access to a single drawer. Instead, the cash drawer itself is either over, closed, or in balance. Once you designate a drawer as a public cash drawer, the POS automatically assigns employees to the drawer based on their job code settings.

Drawer Checkout Arrives in Aloha QuickService

Aloha QuickService now has the ability to run a drawer checkout very similar to the existing drawer checkout functionality available in TableService. One big difference, the new QuickService feature also allows drawers to run across consecutive cashier shifts - with a single drawer checkout for the entire day. Each cashier gets a single server checkout that represents only their shift and then a drawer has a single checkout that spans two or more cashier shifts.

Backed by the experience and innovation of Radiant Systems Hospitality Division, Aloha POS v6.0 provides a solid foundation to manage your business.
