

Aloha Configuration Center is a centralized database management application that manages Aloha Point-of-Sale configuration settings for multi-store restaurant organizations. It offers remote distribution and access capabilities through an easy-to-use .NET rich-client interface. Aloha Configuration Center builds on the strengths of Aloha Manager and the Aloha Centralized Data Management (CDM) applications to form a new, more powerful, POS database management solution that simplifies database management and lowers the overall cost of ownership.

ACCESS YOUR CONFIGURATION DATA FROM ANYWHERE

The Aloha Configuration Center .NET client provides secure access to your hosted configuration data from any location via the Internet.

This hosted solution provides a single point of administration at a data center that is backed by redundant internet and database access. Network administration, data backup, server software and hardware maintenance are managed for you - allowing you to focus on your business.

CONTROL YOUR DATA WITH SECURITY ROLES & PERMISSIONS

Each user account can contain a unique set of job roles. Each job role is assigned a set of security permissions which determine the functions and options available to the user.

Record-level ownership assignments enforce multiple levels of data security. Each record in the database can be assigned an ownership level which determines who can view and edit the data.

DISTRIBUTE DATA AUTOMATICALLY & PERFORM REAL-TIME UPDATES

Each new menu item, price change or POS configuration update is synchronized with your sites through an automated distribution process.

Each site retrieves its database changes from the data center based on a configurable frequency and updates the appropriate terminals when a system refresh is performed or an end-of-day occurs. Certain updates such as price changes and adding employees take effect without requiring terminals be brought down.

SUPPORT MULTIPLE CONCEPTS & CUSTOM HIERARCHIES

Effectively control multiple stores as well as different concepts from a centralized source. Each site receives only the data applicable to the appropriate concept.

MANAGE ALL YOUR POS CONFIGURATION DATA IN ONE PLACE

Aloha Configuration Center configures all your POS data including hardware and Aloha application settings.

FEATURES OF ALOHA CONFIGURATION CENTER

➤ SECURE, HOSTED ENVIRONMENT

You have access to your Aloha Configuration Center database from virtually any computer with the security of knowing that system administration is being taken care of at a fraction of the cost of doing it yourself.

➤ RICH, EASY-TO-USE INTERFACE

Intuitively designed for the novice user with a rich set of advanced features and tools for the power user. The new 'grid view' style of each function screen keeps your data visible when you add or edit records in the application.

➤ ADVANCED CONFIGURATION OPTIONS

New concepts like versioning and hierarchies give you improved methods for configuring and managing POS data including pricing and taxes.

➤ OFFLINE MODE CAPABILITY

Aloha Configuration Center converts to offline mode if connection to the hosted database is temporarily lost. All functions are available offline and any changes made are automatically synchronized when connectivity is restored. Because scheduled updates are pushed to the site in real time - they take effect regardless of current connection status.

➤ DATA INTEGRITY & RECOVERY

Aloha Configuration Center keeps corporate and store data synchronized at all times to allow for consistent reporting and effective systems management. Your configuration data is protected by automatic backup and disaster recovery support enabled by a robust data center infrastructure.

➤ REAL-TIME UPDATE CAPABILITY

Pricing and Employee updates can be performed without bringing down the terminals.

➤ BUILT-IN SECURITY

Multiple layers of security ensure that your data is protected. Role-based user security and record-level data security prevent individual users from accessing designated areas. You have complete control over which types of data can be viewed and/or edited by each user.

➤ EASILY TRANSITION FROM ALOHA MANAGER

Aloha Configuration Center is designed to support the features and functionality of Aloha Manager which greatly reduces the time it takes to become proficient with the new application. Your current store databases can be imported - eliminating the need to re-input your data.

➤ AUTOMATIC APPLICATION UPGRADES

Aloha Configuration Center upgrades are deployed automatically. Each time the application is started it checks for available updates. If an application update exists, it downloads instantly.

➤ SUPPORT FOR MULTIPLE POS VERSIONS ACROSS SITES

Aloha Configuration Center automatically detects what POS version the local store is using and exports the data in the correct version.

REMOTE DATA MAINTENANCE

- Anytime, anywhere access
- Multiple device types
- Remote access capability
